* Only 213 Isolates tested

Antimicrobial resistance criteria

Refer to CLSI M100-S24, January 2014, pgs. 84-86 for the following:

Ceftriaxone MIC > 0.250 µg/ml is considered “decreased susceptibility”

Cefixime MIC ≥0.190 µg/ml is considered “decreased susceptibility”

CLSI has no interpretive guidelines for azithromycin, so CDC standard used
Azithromycin MIC ≥ 1.0 µg/ml is considered a “critical MIC”

Data was created and compiled at the Hawaii Department of Health State Laboratories

This antibiogram supercedes previous versions. Previous data may have been adjusted to meet current interpretive guidelines.
